BUDGET PEST CONTROL

Your home is

VULNERABLE

No matter how old your home is, where it's located, or how it's constructed, it is susceptible to being attacked by Termites. Every year, they cause billions of dollars in damage in the United States alone - damage homeowners insurance won't cover. For an individual homeowner like you, this can mean thousands of dollars in repair and restoration costs. Chances are, you'll never even see any evidence of termites or termite damage until it's too late.

Termite Damage is **PREVENTABLE**

Fortunately you don't have to sit idly by and hope termites don't find your home. Your Pest Professionals at Budget Pest Control can protect your home before termites strike, with **Termidor**[®] termiticide/insecticide, America's #1 termite defense. When combined with regular service inspections from a qualified pest professional, nothing better protects your home from the threat of termites. It employs the world's most advanced undetectable technology, so termites can't avoid it... and you won't even notice it's there.

Termidor's Unique Advantages

- America's #1 termite defense with over 3.5 million homes treated since 2000.
- Nothing offers better long-term protection from termite damage.
- The unique "Transfer Effect" of **Termidor**[®] termiticide/insecticide means affected termites help pass **Termidor**[®] on to their nest-mates before dying themselves.
- Starts working immediately and rids homes of termites fast.
- Responsible, low-dose treatment, with virtually no odor.

How termites get into your home

Crawl Space

Slab

Better than other liquids

Like many other termite control products, **Termidor**[®] termiticide/insecticide is a liquid - but that's where the similarities end. Many older liquid termite products are repellents, which termites can not only detect, but also take great pains to stay away from and circumvent. In fact, given the tiny entry gaps that termites are able to find and easily fit through, it is virtually impossible to maintain a secure chemical repellent barrier around your home. Since **Termidor**[®] is undetectable, termites neither avoid it's treatment zone, nor try to find a way around it. In fact, **Termidor's**[®] unique "Transfer Effect" means affected termites help pass **Termidor**[®] on to their nest-mate before dying themselves.

- 1st individual "carrier" termite
- Secondary "carriers"
- Termites remaining to be affected

50% of the water, 100% Termidor[®]

All liquid termite treatments rely on water for transport into the soil - quite a bit of water, in fact. But **Termidor**[®] HE cuts the water required by other liquid treatments in half. This has the potential to save millions of gallons of the earth's most precious natural resource. All without sacrificing one drop of the proven performance of **Termidor**[®].

Less Disruption

For a liquid termite termiticide product to protect your home from termites, it needs to get several feet into the soil where subterranean termites travel. This requires digging, trenching and drilling around your home. But with **Termidor**[®] HE you can expect a lot less of it. A typical **Termidor**[®] HE treatment entails digging 77% smaller trenches around your home and 33% less drilling.

Smaller Environmental Footprint

In addition to requiring less water, a **Termidor**[®] HE application involves reduced fuel, equipment and vehicle use. When you consider that nearly one million termite applications are preformed every year, that can add up to a much smaller environmental footprint.

Less Water

Less Drilling

Less Digging
